# caninecuddler_finder

This app uses Node.js and Express.js to create a compatibility match for puppies.

The user is first able to click on "Go to survey" to be matched to their perfect puppy or or "API Pup Friend List" for a list of all puppies.

The user is then asked to answer a series of questions including inputting a name and picture link.

The user is then matched to their most compatible cuddler.
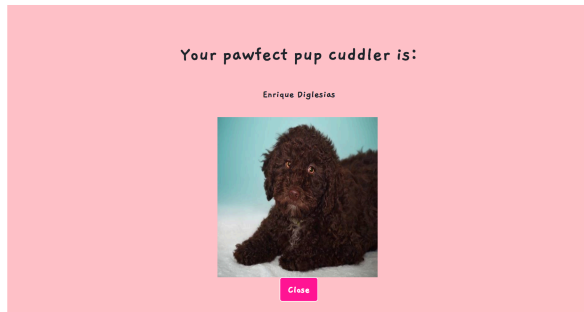

The user is also able to click on "API Pup Friends List" and view all the puppy friends
